The appendix, by Dr. Y. lecture delivered before the Club, June 5, 1874, is a sketch of the character of Herbert Spencer and applauded. The lecture is to show the eminent philosopher bears

evolution. The argument is the fact, almost unrecognized, that Spencer adopted the theory of evolution from important contributions to the long series of articles condensed into the publication of *Mr. Spencer's* in 1861. He was, however, but the first to make the elucidation of the law so associated with his name that it has even taken the basis of Mr. Spencer's philosophy of evolution; and he has been elaborating the principles of foundation stories in his
